

MAINTENANCE GUIDE

POST GAME :

- Perform mound & batters box maintenance.
 - Use a rake or hose to move infield mix off of the turf areas and back onto the infield to prevent lip build-up.
 - Remove bases and mat drag infield.
-
- To prevent puddles from forming, fix low areas on the infield. Remove conditioner from the surface of the low area. Fill in with infield mix. Compact the infield mix until the low area matches the grade and firmness of the rest of the field. Recover with conditioner.

POST SEASON :

- Remove any lips that formed during the season.
- Make any necessary repairs to the mound and batters boxes.
- Add infield mix if field has gotten low.
- Nail drag field as deeply as possible or till top three inches of field. Regrade field and roll to compact.
